iTek<sup>®</sup> Hardy Frame manufactures and markets the revolutionary MiTek<sup>®</sup> Hardy Frame<sup>®</sup> shear wall system, and has been the leader in the pre-fabricated shear wall industry for over 15 years. The MiTek<sup>®</sup> Hardy Frame<sup>®</sup> system allows Building Design Professionals to economically and safely minimize wall space and maximize wall openings while resisting high wind and earthquake loads.

The MiTek® Hardy Frame® product line includes Panels, Brace Frames, Special Moment Frames, and various accessory items for complete installation. The new HFX design presented in this catalog has been tested per the ICC-ES Acceptance Criteria AC322, and has shown to provide excellent strength, excellent stiffness, and excellent ductility.

The original Hardy Frame<sup>®</sup> shear wall system was conceived and developed by Gary L. Hardy, a licensed General Contractor with over 25 years of framing experience. His vision was to develop a strong yet durable pre-fabricated shear wall solution that is cost effective, simple to install, and easy to inspect in order to eliminate the problems and hidden costs associated with site-built plywood shear walls.

From its inception the MiTek® Hardy Frame® Shear Wall System has proven to be the leading innovator in it's category. In fact, the Hardy Frame® was the first to be recognized by ICBO-ES and LA City, the first to gain approval for multi-story applications, the first Balloon Wall application, and the first to be recognized to comply with the 2003 and 2006 IBC and IRC Building Codes. Our 9 inch Panel remains the narrowest prefabricated shear wall in the industry and we have now expanded our product line to include 15 and 21 inch widths.

MiTek<sup>®</sup> Hardy Frame is a wholly owned subsidiary of MiTek<sup>®</sup> USA, Inc., which is part of Warren Buffett's Berkshire Hathaway, Inc. By combining our talents with MiTek's manufacturing, engineering, and software expertise, we have amassed the resources to develop and offer the best products and services for our customers. The latest result of these efforts is the development of the HFX product line.

Our mission remains to provide you with the safest and most cost effective solutions to all of your shear and wall bracing challenges. We strive to accomplish this by adopting a process of constant improvement – continuously seeking ways to improve our operations, our products, and our services.

All of the MiTek<sup>®</sup> Hardy Frame<sup>®</sup> products are conveniently available through local lumber yards and building hardware suppliers. Please contact us today to discover how the MiTek<sup>®</sup> Hardy Frame<sup>®</sup> shear wall system can provide you with the <u>Best Value</u> solutions to your shear and wall bracing needs.

For more information, please call us at 800-754-3030 or visit our website at www.hardyframe.com

### **Ordering Information**

- 1) For Panels, adding STK after the model number indicates HFX Stacking Panels with built-in HFSW-Stacking Washers welded inside the top channel.
- 2) HFX/S models (not shown) are fabricated to standard steel stud heights of 96-5/8", 108-5/8" etc.
- 3) Custom heights are available for Panels, Brace Frames and Posts not to exceed the maximum height listed for that product.
- 4) Model number HFX-9x79.5, HFX-12x78, HFX-15x78, HFX-18x78, HFX-21x78 and HFX-24x78 Panels come with two straps welded to the solid face.
- 5) All models can be ordered custom with welded straps on either face.
- 6) For Post, order with 1-1/8 diameter rods when connecting to Panels, 7/8 diameter for Brace Frames.

### **Connector Information**

- 1) For connections to wood (specific gravity 0.5 or greater), screws are 1/4" diameter MiTek® Pro-Series Screws™ (ESR-2761), or equal, with a minimum design lateral load of 418 lbs. ASD (excluding any duration of load stress increase). For connections to steel (No. 18 gauge minimum), screws are 1/4" self-drilling tapping screws (referenced in a current ICC-ES Evaluation Report) with a minimum design lateral load of 302 lbs. ASD (excluding any duration of load stress increase).
- 2) Screws at top are 3-inches when attaching directly to the collector. When installing a 2x wood filler (specific gravity of 0.5 or greater) at the top connection, the minimum screw length is 4-1/2 inches.
- 3) Screws at bottom (when applies) are 4-1/2 inches at Panel, Bearing Plate (HFXBP) and Brace Frame connections.
- 4) 1/4" diameter edge screws to adjacent framing are required when installing fillers above greater than 1-1/2" or when specified by the Building Design Professional.

- 1) STD Anchor Bolts are ASTM F1554 Grade 36.
- 2) HS Anchor Bolts are ASTM A193 Grade B7 stamped (B7) on both ends.
- 3) HFAB anchor bolt assemblies also available in 7/8" diameter for Brace Frames.
- 4) HFSW12 and HFTC12 apply to 12 inch Panel widths. HFSW15-24 and HFTC15-24 apply to 15, 18, 21 and 24 inch Panel widths.

### **General Information**

The MiTek® Hardy Frame® HFX Panels and Brace Frames combine the most desirable properties for a shear wall: strength, stiffness, and ductility. This revolutionary system has been tested and evaluated under the ICC-Evaluation Service AC322 Acceptance Criteria, and has been proven to provide the highest allowable shear loads in the industry combined with abundant ductility for a seismic "R" value of 6.5. Along with its superior engineering properties, the HFX system is easier than ever to install, is code listed for varied installations including on floor systems and stacking conditions with practical anchorage solutions for standard as well as high strength hold down rods.

### Features presented in this catalog include:

- Allowable values for installations on 2500, 3000, and 4000 psi concrete are combined in one table.
- The allowable design values in this catalog have been increased in accordance with the 2015 IBC Code.
- Anchorage details have been revised.
- Includes reinforced anchorage solutions for single and back-to-back Panel installations.
- New accessories including templates for 2x6 wall framing, base extensions for back-to-back installations (HFXDB) and MiTek® Pro-Series™ Screws.
- Anchor bolt assemblies for threaded rod lengths of 3, 4, 5, and 6 foot.
- Tables are sequenced by height.
- Examples of plan specifications are shown at the end of each section.

MiTek® Hardy Frame® HFX Panels are available in widths of 9, 12, 15,18, 21 and 24-inches and in heights that correspond to a standard portal (78-inches) and standard wood stud lengths. For slab or curb installations simply secure to the foundation with two 1-1/8-inch diameter hold down anchors and connect the top channel to a collector above with 1/4-inch diameter screws through pre-punched holes. No connections are required to the edges or to either face.

MiTek® Hardy Frame® HFX Brace Frames are 32 or 44-inches wide and as with Panels, are fabricated to standard wood stud lengths. Hold down anchors for Brace Frames are 7/8-inch diameter and may be either standard or high strength for increased allowable loads. Connections to the foundation require two 7/8-inch diameter standard grade hold down anchors. Top connections are accomplished with 1/4-inch diameter screws into the collector above. No other connections are required but field studs are provided for easy attachment of surface finishes with self tapping screws.

### **Code Evaluations:**

For the most current code report listings refer to our website www.hardyframe.com.

### **Product Use:**

The MiTek® Hardy Frame® products are designed and manufactured for the specific purposes described in this catalog. Any changes to the products or in the installation procedures must be approved by the Building Design Professional and are the sole responsibility of the designer.

# **Quality Statement:**

MiTek® Hardy Frames warrants to its customers that its products are free from material defects of manufacture or design, and will perform in substantial accordance with published specifications, if properly used.

### **Testing:**

MiTek® Hardy Frames performs extensive testing on all of the MiTek® Hardy Frame® structurally rated products. All final testing is conducted by a third party testing laboratory.

### **Material:**

MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Panels, Brace Frames and Posts are manufactured from prime quality steel which meets the requirements of ASTM A653 SS Grade 50 steel and ASTM A36 hot-rolled steel built in at hold down connections.

### **Finish:**

All galvanized steel has a minimum G60 hot-dipped galvanized zinc coating.

### **Threaded Rod/Hold Down Bolts**

Unless noted otherwise the "STD" hold downs are ASTM F1554 grade 36, and the "HS" (high strength) are ASTM A193 grade B7 or equivalent.

# **Notes to the Specifier:**

- The allowable loads shown in this catalog are based on Allowable Stress Design (ASD) methodology.
- The published allowable design loads for the MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Panels and Brace Frames
  are based on calculations and testing.
- For the MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Panels and Brace Frames, the allowable design loads may
  change depending on the type of support below. Please be sure to refer to the proper table
  and installation details for accurate load values and proper installation.
- It is important to be clear as to the surface you want the MiTek® Hardy Frame® Panel or Brace Frame to be installed on concrete, sill plate, raised floors and upper floors, etc. See Plan Specification Recommendations on pages 21, 25, 29 and 33 and 38 respectively.
- For a combination of over-turning and gravity loads the specifier must review and check the bearing pressure on the structure below.
- The allowable design values for the MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Panels and Brace Frames shown in these tables are for the 2015 IBC code.

### **Notes to the Framer:**

- Install all specified fasteners in accordance with the instructions of this catalog.
- When necessary, all field welding should be done in accordance with A.W.S. standards.
   WARNING: Welding galvanized steel may produce harmful fumes and should be performed in well-ventilated environments. Follow proper welding procedures and safety precautions.
- Washers are required under the head or nut of all bolted connections.
- Please refer to the proper installation specifications and details as provided in the plans.

### **General Notes:**

- MiTek<sup>®</sup> reserves the right to change specifications, designs, and models without notice and liability of such changes.
- The information presented in this catalog supercedes all information published in previous documents and publications.
- This catalog is designed as a general reference for the MiTek® Hardy Frame® products. For
  more specific and most up to date information, visit our website at hardyframe.com or contact
  us directly at 800-754-3030.
- For installations involving unusual or extreme applications and conditions, contact MiTek® Hardy Frames at 800-754-3030.
- This catalog may not be reproduced in whole or in part without the written permission of MiTek<sup>®</sup>, USA.

### **CUSTOMER SERVICE**

MiTek® Hardy Frame is the industry leading premanufactured shear wall and customer service is a top priority. Because we are focused on shear walls and have a strong commitment to service, we can provide you with the best support in the industry.

To the Design Professional this means prompt and correct technical answers and full design solutions that are backed by extensive testing and research. From providing allowable design loads to addressing specific repairs you can always count on our answers.

To the Building Official, our Code Reports and Typical Installation Details will make the plan check process and field inspection easier.

To the Installer, our background and knowledge in framing and construction allows us to communicate with the field and have an understanding of the installation from the point of view of the installer. Quick responses are a must and project delays are avoided at all costs. Help is available by telephone, or by one of our many field representatives with real field experience.

To all parties, in addition to literature, details and telephone support, our company provides jobsite visits, seminars, and personal training sessions. We respond to our customers and you can rest assured that we will be there for you when you need us.

How can we help you today?

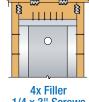

2x Filler

0

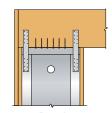

**Concrete Bearing** 

**Top Plates** 1/4 x 3" Screws

4x Filler 1/4 x 3" Screws

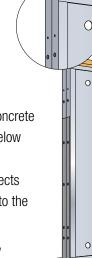

**Portal** 1/4 x 3" Screws. 78 Inch **Panel Heights Include Welded Straps** 

**Nuts And Washers** (Requires 5,000 psi Non-Shrink Grout)

Raised Floor **Head Out** 

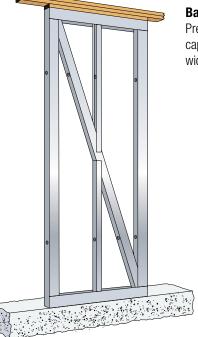

• Installation on nuts and washers provides for leveling at uneven concrete - open end box wrench may be used to secure connection from below Note: 20% reduction in allowable shear values

- Raised floor head out by passes wood framing to eliminate the effects of shrinkage and crushing, while providing a direct shear transfer to the foundation
- Raised floor head out requires less material by eliminating the rim, bearing plate and bottom screws
- With proper shear transfer and anchorage "Back to Back" installations provide two times the allowable shear value without increasing the wall length

"Back to Back" installations provide two times the allowable shear value

### Back to Back RA and allowable load note:

Pre-engineered Reinforced Anchorage design for Back to Back applications develops the full capacity of each Panel, providing two times the allowable shear value without increasing the wall width (detailing provided on sheet HFX-1)

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 lb = 4.45 N, 1 psi 6.89 kPa.

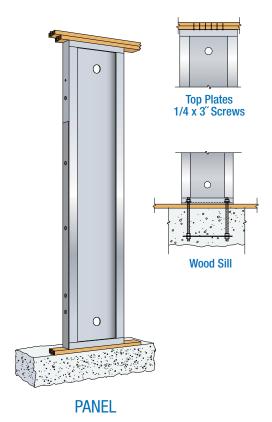

### Notes

- 1) The values in this table are Allowable Stress Design (ASD) excluding a 1.33 stress increase and pertain to installation on 2500, 3000, and 4000 psi concrete or nut & washer with 5,000 psi minimum non-shrink grout.
- 2) For installation on a nut & washer (only) table values must be multiplied by 0.80.
- 3) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.
- 4) The applied vertical axial loads are concurrent with the allowable shear load. For Panels the axial load must be applied within the middle 1/3 of the Panel width or be uniformly distributed across the entire Panel width. For Brace Frame the axial load is acting and along the centerline of the post.
- 5) Allowable Shear, Drift @ V and Uplift @ V values may be linearly interpolated for intermediate height or axial loads.
- 6) The uplift values listed assume no resisting axial load. When axial loads occur concurrently with lateral loads calculate anchor tension with the "Equation for Tension Uplift with Added Axial Load" presented on page 40 of this catalog. For Brace Frames the anchor tension load is the tabulated uplift minus the applied axial load on the post.

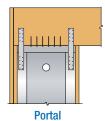

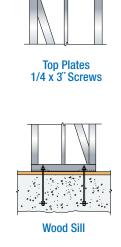

Portal 1/4 x 3" Screws. 78 Inch Panel Heights Include Welded Straps

- Panels installed on wood sill plates have more ductility but, for some sizes the allowable shear is less to account for crushing of wood below.
- Allowable values in Table 1.2 have been reduced when necessary to maintain code drift limit.
- Because the Brace Frame base is wider, overturning forces cause less compression on wood sill.

### Installation:

- Set bolts 4 1/4" inches above concrete
- Moisture barrier (15# felt, Moist Stop, Etc.) recommended when installing on treated wood.

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N

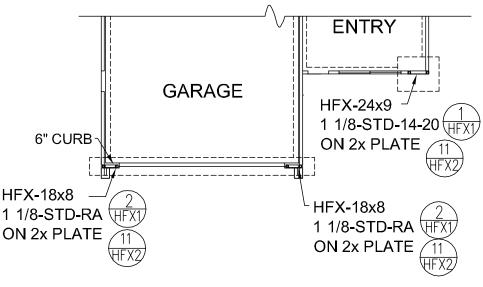

### **Notes**

- 1) The values in this table are Allowable Stress Design (ASD) excluding a 1.33 stress increase and pertain to installation on a Wood Sill Plate supported on concrete or masonry foundations.
- 2) Wood Sill Plate assumes 2x wood sill plate (Fc $\perp$ = 625 psi) below the Panel or Brace Frame.
- 3) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.
- 4) The additional vertical axial loads are concurrent with the allowable shear load. For Panels the axial load must be applied within the middle 1/3 of the Panel width or be uniformly distributed across the entire Panel width. For Brace Frames the axial load is acting along the centerline of the post.
- 5) Allowable Shear, Drift @ V and Uplift @ V values may be linearly interpolated for intermediate height or axial loads.
- 6) The Uplift values listed assume no resisting axial load. To determine the anchor tension load in Panels at design shear values and including the effect of axial loads, the tension load equals uplift minus P/2, where P is the axial load on the Panel. For Brace Frames the anchor tension load equals uplift minus P, where P is the axial load on the Post.

# On 2x Sill Plate Table 1.2

# **FOUNDATION PLAN**

For referenced details see catalog pages 50-53

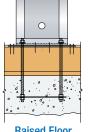

2x Filler 1/4 x 4 1/2" Screws

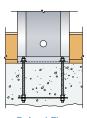

4x Filler 1/4 x 3" Screws

- Allowable values in Table 1.2A have been reduced when necessary to maintain code drift limit.
- Table values for Panels installed on a wood floor system assume installation of a MiTek® Hardy Frame® Bearing Plate.
- \*Custom Heights Available Installing at raised floor head-out
  - Provides allowable values from Table 1.1A.
  - Provides a direct shear transfer to the foundation.
  - Requires less material by eliminating rim, Bearing Plate and bottom screw
  - Because Brace Frames are wider, overturning forces cause less compression on wood below.
  - Unlike Panels, Brace Frames install on the bottom plate above floor systems. MiTek® Hardy Frame® Bearing Plates are not necessary.

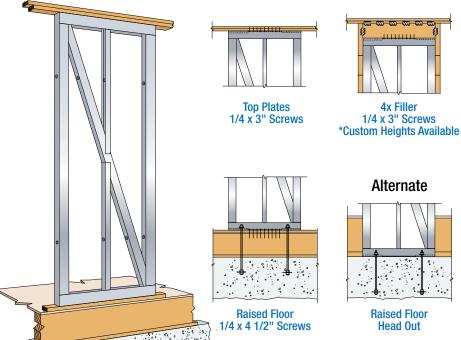

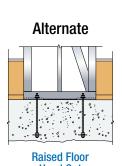

**Raised Floor** 1/4 x 4 1/2" Screws

**Raised Floor** Head Out

4x Filler

1/4 x 3" Screws

			6,500	655	0.221	2,795	655	0.221	2,795	

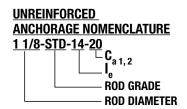

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N

### **Notes**

- 1) The values in this table are Allowable Stress Design (ASD) excluding a 1.33 stress increase and pertain to installation on Raised Floor Systems supported on concrete or masonry foundations.
- 2) Raised Floor System for Panels assumes a 2x wood sill plate, EWP rim board (Fc ⊥= 680 psi, 12 inch depth)with a MiTek® Hardy Frame® Bearing Plate installed beow. For EWP rim boards up to 18 inches deep the allowable shear value must be multiplied by 0.96 for 12 inch Panel widths and by 0.98 for 18 and 24 inch widths. For all Panel widths the corresponding drift does not change. Raised Floor System for Brace Frames assume a 2x wood sill plate, EWP rim board (Fc⊥ = 680 psi,12 inch deep), floor sheathing and a 2x wood bottom plate (Fc⊥ = 625 psi) below. For EWP rim boards up to 18 inches deep the allowable shear value does not change and the corresponding drift must be multiplied by 1.03.
- 3) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.
- 4) The applied vertical axial loads are concurrent with the allowable shear load. For Panels the axial load must be applied within the middle 1/3 of the Panel width or be uniformly distributed across the entire Panel width. For Brace Frame the axial load is acting along the centerline of the post.
- 5) Allowable Shear, Drift @ V and Uplift @ V values may be linearly interpolated for intermediate height or axial loads.
- 6) The Uplift values listed assume no resisting axial load. To determine the anchor tension load in Panels at design shear values and including the effect of axial loads, the tension load equals uplift minus P/2, where P is the axial load on the Panel. For Brace Frames the anchor tension load equals uplift minus P where P is the axial load on the Post.

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N

### **Notes**

- 1) The values in this table are Allowable Stress Design (ASD) excluding a 1.33 stress increase and pertain to installation on Upper Floor Systems that bear on wood frame walls below.
- 2) Upper Floor System for Panels assumes double 2x wood sill plates in the wall below, EWP rim board (Fc⊥ = 680 psi, 12 inch depth) with a MiTek® Hardy Frame® Bearing Plate installed below. For EWP rim boards up to 18 inches deep the allowable shear value and the corresponding drift do not change. Upper Floor System for Brace Frames assumes double 2x wood plates in the wall below, EWP rim board (Fc⊥ = 680 psi 12 inch deep), floor sheathing and a 2x wood bottom plate (Fc⊥ = 625 psi) below. For EWP rim boards up to 18 inch deep the allowable shear value does not change and the corresponding drift must be multiplied by 1.03.
- 3) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.
- 4) The applied vertical axial loads are concurrent with the allowable shear load. For Panels the axial load must be applied within the middle 1/3 of the Panel width or be uniformly distributed across the entire Panel width. For Brace Frame the axial load is acting along the centerline of the post.
- 5) Allowable Shear, Drift @ V and Uplift @ V values may be linearly interpolated for intermediate height or axial loads.
- 6) The Uplift values listed assume no resisting axial load. To determine the anchor tension load in Panels at design shear values and including the effect of axial loads, the tension load equals uplift minus P/2, where P is the axial load on the Panel. For Brace Frames the anchor tension load equals uplift minus P where P is the axial load on the Post.

# On Upper Floors Table 1.3A

# 2nd STORY FRAMING PLAN

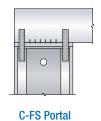

For referenced details see catalog pages 52-55

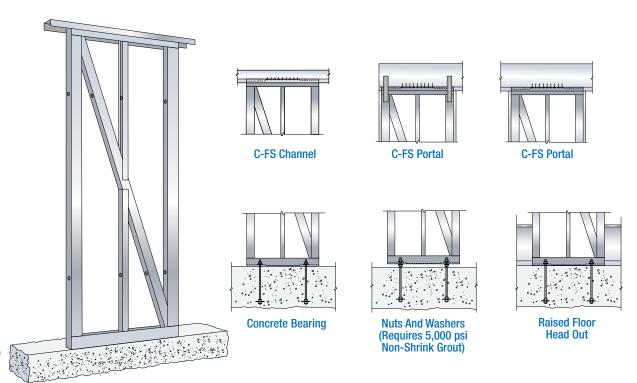

Concrete Bearing

Nuts And Washers (Requires 5,000 psi Non-Shrink Grout)

- HFX/S products are manufactured to cold formed steel stud heights. Nominal 8' heights are 96 5/8" net, nominal 9' is 108 5/8", etc.
- Installation can be directly on concrete (moisture barrier recommended), with a C-FS channel below, or a nut and washer for leveling or height adjustment up to ± 1-1/2"
- Top connections are made with 1/4" diameter self tapping screws after installing floor or roof members above.
- Panels and Brace Frames are 3 1/2" net depth.

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 lb = 4.45 N, 1 psi 6.89 kPa.

#### **Notes**

- 1) The values in this table are Allowable Stress Design (ASD) excluding a 1.33 stress increase and pertain to installation on 2500 psi concrete or nut & washer with 5,000 psi minimum non-shrink grout.
- 2) For installation on a nut & washer (only) table values must be multiplied by 0.80.
- 3) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.
- 4) The additional vertical axial loads are concurrent with the allowable shear load. For Panels the axial load must be applied within the middle 1/3 of the Panel width or be uniformly distributed across the entire Panel width. For Brace Frame the axial load is acting and along the centerline of the post.
- 5) Allowable Shear, Drift @ V and Uplift @ V values may be linearly interpolated for intermediate height or axial loads.
- 6) The uplift values listed assume no resisting axial load. When axial loads occur concurrently with lateral loads calculate anchor tension with the "Equation for Tension Uplift with Added Axial Load" presented on page 40 of this catalog. For Brace Frames the anchor tension load is the tabulated uplift minus the applied axial load on the post.

To structurally resist lateral wind and seismic loads in wood or steel framed buildings strategic Braced Wall Lines must be properly established. The Prescriptive Design approach helps identify lateral load resisting Braced Wall Lines (BWLs), establish required minimum Braced Wall Panel (BWP) lengths along each Braced Wall Line, define the proper location of Braced Wall Panels within those lines, and provides detailed construction methods for constructing the BWPs.

The general rule for prescriptive bracing design is that all exterior walls, as well as interior walls spaced no greater than the maximum distance set forth in Section R602.10, must be identified as Braced Wall Lines for resisting lateral load. When BWLs offset no more than 4 feet apart in either direction, the wall lines can be considered as one continuous Braced Wall Line. To be considered an effective Braced Wall Line, the IRC Code requires a minimum percentage of the wall length to be adequately constructed with a pregualified material and fastening schedule. The percentage required depends on the applied seismic or wind load, building stories and other adjusting factors.

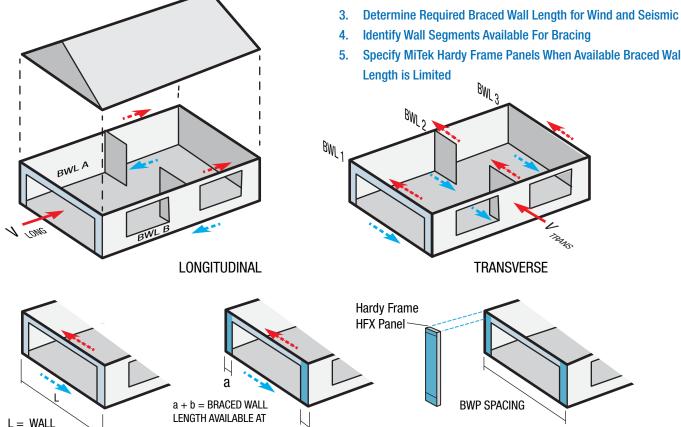

BWL 1

LENGTH AT BWL 1

As with engineered designs in the IBC Code, IRC Prescriptive Wall Bracing Design often results in sections of walls that are too narrow for conventional Braced Wall Panel requirements to be met. The most common example is at the garage front with narrow Braced Wall Panel lengths next to the door. Mitek® Hardy Frame® Panels are the best solution for these conditions.

The MiTek® Hardy Frame® 9" wide Panel is the narrowest prefabricated shear wall in the industry and is a very cost effective solution. Anchors for the MiTek® Hardy Frame® Panel in a Prescriptive Wall Bracing Design can be cast in during the concrete pour or post installed with MiTek USP CIA-Gel 7000-C epoxy. MiTek® Hardy Frame® HFX Panels provide the structural requirements in narrow wall lengths and their "C-Shape" is the most trade-friendly in the industry. The MiTek® Hardy Frame® Prescriptive Braced Wall Solution is the ideal option for you and your contractors. For more information contact us at 800-754-3030 or visit us at hardyframe.com.

- **Determine Wind Speed and Seismic Design Category**
- 2. **Determine Braced Wall Line Locations**
- Specify MiTek Hardy Frame Panels When Available Braced Wall

#### **Equation for Tension Uplift With Added Axial Load**

The expressions listed below may be used to determine uplift tension (T) with the additional axial load  $P_{add}$ 

#### **MiTek® Hardy Frame® Panels**

**HFX 9x:** 
$$T=8.6 \ f'_c - \sqrt{74.4 f'_c^2 - 1.19 f'_c (5.5 P_{add} + 2 VH)} - P_{add}$$

**HFX 12x:** 
$$T=12.2 \ f'_c - \sqrt{148.8 f'_c^2 - 1.19 f'_c (8.50 P_{add} + 2 VH)} - P_{add}$$

**HFX 15x:** 
$$T$$
=14.7  $f'_c$  - $\sqrt{216.9 f'_c^2 - 1.19 f'_c (9.75 P_{add} + 2 VH)}$  -  $P_{add}$ 

**HFX 18x:** 
$$T=18.3 \ f'_c - \sqrt{334.8 f'_c^2 - 1.19 f'_c (12.8 P_{add} + 2 VH)} - P_{add}$$

**HFX 21x:** 
$$T$$
=21.9  $f'_c$  - $\sqrt{478.1 f'_c^2 - 1.19 f'_c (15.8 P_{add} + 2 VH)}$  -  $P_{add}$ 

**HFX 24x:** 
$$T=25.4 \ f'_c - \sqrt{647.0 f'_c^2 - 1.19 f'_c (18.8 P_{add} + 2 VH)} - P_{add}$$

Variable	Description/Units
f' <sub>c</sub>	Concrete Compression Stress / psi
V	Shear Load / lbs.
Н	Panel Height / in.
P <sub>add</sub>	Vertical Load / lbs.

#### **Example 1: Combine HFX Panels of Different Stiffness in the Same Wall Line by Proportioning Loads.**

#### **Given:**

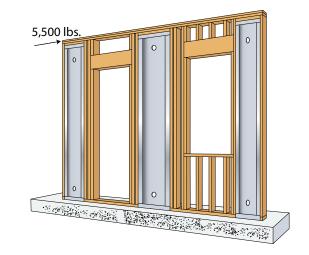

2012 IBC, Seismic loading Concrete f'c = 2,500 psi Design Shear Load = 5,500 lbs. Axial Load = 1,000 lbs per Panel Wall height = 8'1"

#### Try: (2) HFX-12x8 with (1) HFX-18x8

#### **Step 1: Calculate Stiffness (k)**

For HFX12x8: Allowable Shear from Table 1.1A (HS grade HD) = 1,480 lbs Corresponding Drift = 0.225 in Stiffness ( $k_{12}$ ) = 1,480 / 0.225 = 6,578 lbs/in

For HFX18x8: Allowable Shear from Table 1.1A (HS grade HD) = 3,740 lbs Corresponding Drift = 0.312 in Stiffness ( $k_{18}$ ) = 3,740/ 0.312 = 11,987 lbs/in

**Total Stiffness**  $(k_{total}) = k_{12} + k_{12} + k_{18} = 6,578 \text{ lbs/in} + 6,578 \text{ lbs/in} + 11,987 \text{ lbs/in} = 25,143 \text{ lbs/in}$ 

#### **Step 2: Calculate Relative Stiffness**

 $k_{12} / k_{total} = 6,578 / 25,143 = 0.26$  $k_{18} / k_{total} = 11,987 / 25,143 = 0.48$ 

#### **Step 3: Check Load Distribution**

HFX-12x8 =  $0.26 \times 5,500 \text{ lbs} = 1,430 \text{ lbs} < 1,480 \text{ lbs}$ HFX-18x8 =  $0.48 \times 5,500 \text{ lbs} = 2,640 \text{ lbs} < 3,740 \text{ lbs}$ 

#### **Example 2: Designing for Stacked MiTek® Hardy Frame® Panels or Brace Frames**

#### Given

2012 IBC, Wind Loading, Concrete f' = 2,500 psi

1st Floor Wall Height: 9' 1" Floor System Depth: 1' 0" 2nd Floor Wall Height: 8'1"

Shear Load at 1st Floor  $(V_1)$ : 1,000 lbs Wind Shear Load at 2nd Floor  $(V_2)$ : 1,000 lbs Wind

Shear Load at Foundation ( $V_{base}$ ): 2,000 lbs Wind (1,000 lbs + 1,000 lbs)

No Additional Vertical Loads

#### Step 1. Select

HFX-18x8 (STD Rods) at Second Floor: Allowable Wlnd Shear from Table 1.3A = 2,740 lbs HFX-18x9 (HS Rods) at First Floor: Allowable Wlnd Shear from Table 1.1A = 3,310 lbs

#### Step 2. Check Shear

A) Shear at the Second Floor (V2)

HFX-18x8 Allowable Shear = 2,740 lbs > 1,000 lbs

B) Shear at the Foundation (V<sub>base</sub>)

HFX-18x9 Allowable Shear = 3,310 lbs > 2,000 lbs  $\mathbf{OK}$ 

#### **Step 3. Check Moment**

A) Calculate Cumulative Overturning Moment of the Stacked Panels

Second Floor @  $18' \ 2'' = 218 \text{ in x } 1,000 \text{ lbs} = 218,000 \text{ in-lbs}$ 

First Floor @ 9' 1'' = 109 in x 1,000 lbs = 109,000 in-lbs

Total Calculated Overturning Moment = 327,000 in-lbs.

#### B) Calculate Moment Capacity of the Stacked Panels

Use the First Floor Panel Moment Capacity as the Capacity of the Stacked Panels

**Allowable Moment** = Allowable Shear x Panel Height = 3,310 lbs x 104.25in = **345,068 in-lbs.** 

#### C) Check Cumulative Overturning Moment

345,068 in-lbs (Capacity) > 327,000 in-lbs (Cumulative moment) **OK** 

# 1,000 lbs 8'-1" 1,000 lbs 1,000 lbs 9'-1"

#### **Step 4. Foundation Anchor Tension**

<u>Calculated Overturning Moment</u> x Uplift at Allowable Moment. = 327,000 in-lbs / 345,068 in-lbs x 39,477 lbs = 37,410 lbs

#### **MiTek® Hardy Frame® Post**

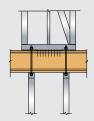

The MiTek® Hardy Frame® HFP and HFP/S Post are available in 7/8 inch diameter hold down rods for connecting to Brace Frames above and in 1-1/8 inch diameter for connecting to Panels above.

Tables provide tensile values for Standard Grade (STD) and for High Strength (HS) hold down rods. Be sure to include the embed callout on the foundation plan

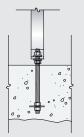

The access holes to both the bottom and the top hold down rods are now located on the same edge of the post.

All Posts are 3 1/2" x 3 1/2" square and are fabricated from 12 gauge steel. Custom heights up to the maximum listed in the table are available.

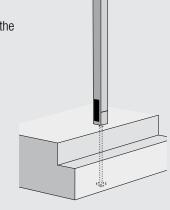

MiTek® Hardy Frame® Brace Frame two MiTek® Hardy Frame® Posts below

HFP/S13-1 1/8	156 5/8	1 1/8	12,000	21,620	35,275				

- 1) The values in this table are Allowable Stress Design (ASD), exclude a 1.33 stress increase, and assume installations on a rigid base, or a nut and washer with non-shrink grout of 5000 psi minimum compressive strength.
- 2) The HFP is used to transfer tension and compression loads from Panels or Brace Frames on upper floors. The amplification factor (  $\Omega$  ) for discontinuous lateral systems does need to be applied.
- 3) The maximum allowable compression of the post is limited as follows:

  A) Wood with 625 psi allowable
  - compression perpendicular to grain = 7,656 lbs.
  - B) Wood with 680 psi allowable compression perpendicular to grain = 8,330 lbs.
  - C) 2500 psi Concrete = 10,412 lbs. D) 3000 psi Concrete = 12,495 lbs.
  - E) 4000 psi Concrete = 16,660 lbs.
- 4) For installation on supporting materials other than noted above, the Design Professional must check the Bearing Stress

based on the Post bearing area of 12.25

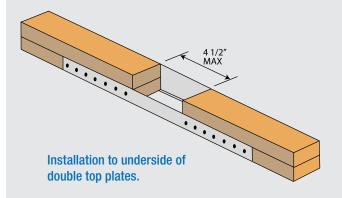

square inches.

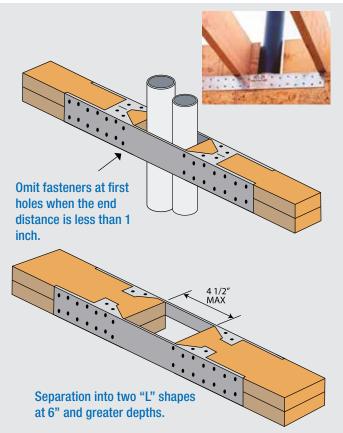

- 5) For compression loads exceeding the allowable bearing stress of the supporting material the Building Design Professional is permitted to design bearing plates to increase the bearing area in order to reduce the bearing stress.
- 6) STD indicates bolts complying with ASTM F1554 Grade 36. HS rods include, but are not limited to ASTM F1554 Grade 105, ASTM A193 Grade B7 or ASTM A354 Grade BD.

44

#### MiTek® Hardy Frame® Saddle

The MiTek® Hardy Frame® Saddle (HFS) is a 14 gauge steel channel intended to be used as a splice at locations where plumbing or other vertical penetrations destroy the structural integrity of a walls top plates. The Saddle can be installed over the top or from the underside of the top plates, and is capable of resisting both tension and compression loads in a clearspan of up to 4-1/2" inches. For wall depths greater than 3-1/2", or to install after plumbing lines have been run, the product can be separated into two "L" shapes by gripping the legs of the channel and flexing the top surface along the serration lines.

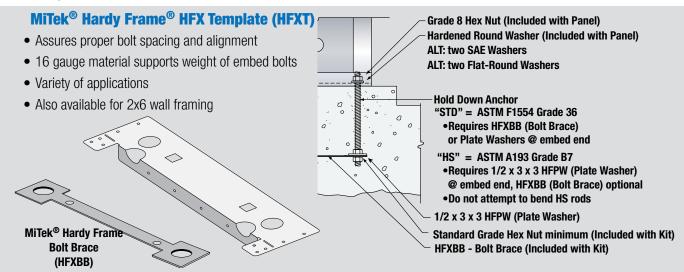

MiTek <sup>®</sup> Hardy Frame <sup>®</sup> Saddle <sup>1, 2</sup>						
Model Number	Fastener Quantity <sup>3,4</sup> Allowable Tension <sup>5,6</sup> (lbs) Allowable Compression (lbs					
HFS24	24-16d common	2950	2500			
HFS36	32-16d common	4280	2500			

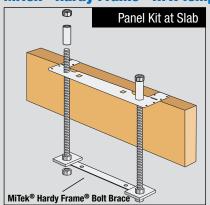

For SI 1 inch = 25.4 mm, 1 lb. = 4.45 N

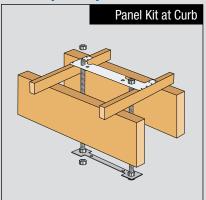

- 1. Loads shown are Allowable Stress Design (ASD) and exclude a 1.33 stress increase.
- 2. The maximum notched section in the wood member is 4-1/2 inches.
- 3. Fastener quantity is the number of 16d Common nails to be installed into each of the members to be joined.
- 4. When the end distance from the joint to the first nail hole is less than 1-inch, omit the (2) nails in the 3-inch side-plate and the (1) nail in the 1-1/2 inch side-plate that are nearest the joint. For this condition there is no reduction in values.
- 5. The allowable tension capacities are for normal duration. The values may be adjusted for other durations, such as for seismic and wind loading in accordance with the AF&PA NDS.
- 6. Allowable tension capacities assume the Saddle is attached to lumber members with a specific gravity of 0.49 or higher

#### **Hold Down Anchor Assemblies:**

1-1/8 STD = 1-1/8 x 32" ASTM F1554 Grade-36 all thread with (3) Standard Hex Nuts.

1-1/8 HS = 1-1/8 x 38" ASTM A193 Grade-B7 all thread with (1) 1/2x3x3 ASTM A36 Plate Washer & (3) Standard Hex Nuts 7/8 STD = 7/8 x 30" ASTM F1554 Grade-36 all thread with (1) 1/2x3x3 ASTM A36 Plate Washer & (3) Standard Hex Nuts

7/8 HS = 7/8 x 31" ASTM A193 Grade-B7 all thread with (1) 1/2x3x3 ASTM A36 Plate Washer & (3) Standard Hex Nuts

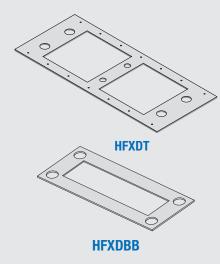

#### For other Anchor Bolt lengths contact MiTek® Hardy Frame

- 1) All Thread length = length of embed (le) + 12" (formboard) + 6" (Kit assembly + height above concrete) For Raised Floor installations adjust the all thread length or extend length with a Grade 8 Coupling nut
- 2) The Hardened Round Washers for connecting the Panel base may be substituted with two SAE or two Round-Flat Washers
- 3) STD assemblies require a MiTek® Hardy Frame® Bolt Brace (Minimum) double nutted at the embed end or 1/2x3x3 ASTM A36 Plate Washer
- 4) HS assemblies require 1/2x3x3 ASTM A36 Plate Washer (Minimum) and the MiTek® Hardy Frame® Bolt Brace is optional
- 5) HS all thread rods provided by MiTek® Hardy Frame® are stamped on both ends

  (HF)

  (BT)

#### Back-to-Back MiTek® Hardy Frame® HFX Double Template

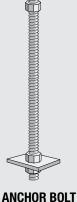

- Locates bolts for "Back-to-Back" installation in 8" wall framing
- Large cut-outs allow concrete and mortar placement
- 14 gauge material supports weight of embed bolts **Back to Back Anchorage Components**
- 4 ea. HFAB 1-1/8 (specify length and STD or HS)
- 1 ea. HFXDT Template
- 1 ea. HFXDBB Bolt Brace

#### **Anchor Bolt Assemblies**

MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Anchor Bolt Assemblies (HFAB) are sold individually in lengths of 36", 48", 60" and 72" inches to provide rod lengths for various embed depths. HFABs are available in Standard Grade (STD) or High Strength Grade (HS) to meet plan specifications and in 1-1/8 inch diameters for anchoring Panels, 7/8 inch diameters for anchoring Brace Frames.

For complete structural components provided in MiTek® Hardy Frame Template Kits order the following:

ASSEMBLY

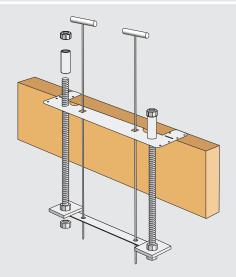

#### **Panels**

- 2 each HFAB1-1/8 (Specify length and STD or HS grade)
- 1 each HFXT Template
- 1 each HFXBB Bolt Brace

#### **Brace Frames**

- 2 each HFAB7/8 (Specify length and STD or HS grade)
- 1 each HFXT Template

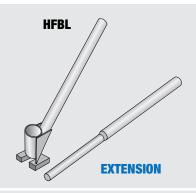

Panels	Brace Frames
HFAB1-1/8x36STD	HFAB7/8x36STD
HFAB1-1/8x48STD	HFAB7/8x48STD
HFAB1-1/8x60STD	HFAB7/8x60STD
HFAB1-1/8x72STD	HFAB7/8x72STD
HFAB1-1/8x36HS	HFAB7/8x36HS
HFAB1-1/8x48HS	HFAB7/8x48HS
HFAB1-1/8x60HS	HFAB7/8x60HS
HFAB1-1/8x72HS	HFAB7/8x72HS

#### MiTek Hardy Frame® T-Rods (HFTR)

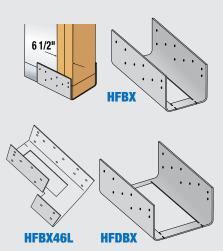

MiTek® Hardy Frame® T-Rods (HFTR) are used in combination with MiTek® Hardy Frame® Templates and Bolt Braces to position the embed end of hold down anchors prior to pouring concrete. T-Rods are 1/2 inch diameter, 5 feet long, pointed on one end with a handle provided on the other end. With the MiTek® Hardy Frame® Template Kit assembled and hung from a form board the installer feeds the pointed end of the HFTR through square holes provided in the Template then through holes provided in the Bolt Brace. When the embed end of the hold down anchor is in the desired location the T-Rod is pushed into the soil at the bottom of the footing to prevent movement during the concrete pour. After the concrete is poured and before it sets remove the T-Rod leaving the anchors positioned perfectly in the footing.

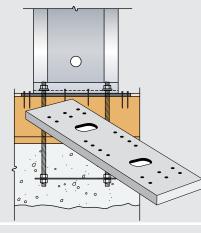

#### MiTek® Hardy Frame® Bolt Lever (HFBL)

- Straightens embed bolts while preventing concrete spall
- Place nut on bolt and position inside the HFBL cylinder. With handle oriented in direction to be bent, pull handle downwards
- Unique base plate applies compression to concrete to prevent spall
- Extension handle provides leverage
- Note: Not recommended for use with high strength rods

#### MiTek® Hardy Frame® Base Extension (HFBX)

- Connects adjacent wood mudsill and stud (or post) to MiTek® Hardy Frame® Panel/Brace Frame
- Adjustable installation for HFBX extends up to 6-1/2" beyond edge of Panel.
- Break-away tab allows installation after Panel/Frame has been set
- HFDBX for back-to-back Panel installations
- HFBX46L (Left) and HFBX46R (Right) connect to 4x6 members
- HFBX66L (Left) and HFBX66R (Right) connect to 6x6 members
- Left and Right configurations accommodate Panel installation flush to one face of 6" framing

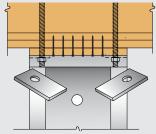

#### **MiTek® Hardy Frame® Bearing Plate (HFXBP)**

For Installation with MiTek® Hardy Frame® Panels

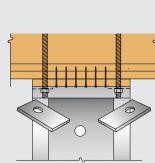

- 3/4" thick x 3 1/2" wide ASTM A36 steel
- Model number corresponds to Panel width, HFXBP length extends 3" beyond Panel edges Check for outside corner conditions!
- Reduces wood deformation from overturning forces
- Reduces effects of shrinkage by eliminating bottom plate

Note: The allowable values in raised floor and upper floor tables assume installation of HFXBP. Installation without a HFXBP may result in a reduction of allowable loads

#### MiTek® Hardy Frame® Stacking Washer (HFSW)

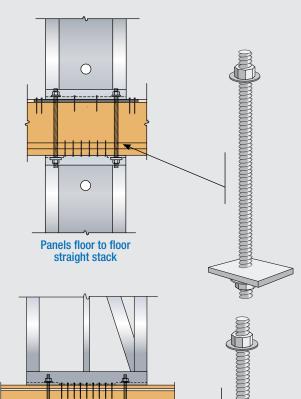

- MiTek® Hardy Frame® Stacking Washers (HFSW) are required in the top of Panels when connecting to a hold down rod from above.
- MiTek® Hardy Frame® STK Panels, include Stacking Washers pre-welded inside the top channel.
- When Stacking Washers have not been pre-welded, they are available individually or in Tension Connector Kits (HFTC)
- HFSW12 measures 2-3/4" x 3" for installation in HFX-12x Panels
- HFSW15-24 measures 2-3/4" x 5" for installation in HFX-15x through HFX-24x Panels

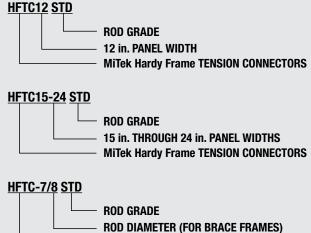

#### MiTek® Hardy Frame® Tension Connectors

\*For joist depths up to 14"

- MiTek® Hardy Frame® HFSW Stacking
  Washers are required in the top of Panels when
  connecting to a hold down rod from above.
- Includes all rods, nuts and washers for making floor to floor tension connections
- Provides connection of Panels and Brace Frames straight or "staggered" stack conditions
- For Panels Indicate Panel width and rod grade
- For Brace Frames Indicate rod grade

#### **TABLE NOTES**

- DESIGNS ARE TO RESIST LOADING PER ACI 318-14. SECTION 17.2.3.4.3
- STD INDICATES ANCHORS COMPLYING WITH ASTM F1554 GRADE 36 WITH A HARDY FRAME BOLT BRACE (HFXBB) INSTALLED WITH DOUBLE NUTS ON THE EMBED END.
- HS INDICATES ANCHORS COMPLYING WITH ASTM A193 GRADE B7 WITH A 1/2"X3"X3"(MIN) HFPW PLATE WASHER INSTALLED WITH DOUBLE NUTS ON THE EMBED END (HFXBB NOT REQUIRED).
- LE = LENGTH OF EMBEDMENT FROM THE TOP OF FOOTING OR GRADE BEAM TO THE TOP OF THE HFXBB BOLT BRACE (TOP OF THE EMBEDDED HFPW PLATE WASHER @ HS ANCHORS)
- CA1 = DISTANCE FROM HD CENTERLINE TO THE END OF THE FOOTING OR GRADE BEAM.
- CA2 = DISTANCE FROM HD CENTERLINE TO BOTH THE FRONT AND THE BACK FACE OF THE FOOTING OR GRADE BEAM.
- SHEAR TIES ARE GRADE 60 (MIN) REBAR AND REQUIRED FOR NEAR EDGE DISTANCE CONDITIONS PER ACI-318-14, F'C = 2,500 PSI. CURBS AND STEM WALLS MUST BE 6 INCH (MIN) WIDTH FOR UA AND RA, 12 INCH (MIN) WIDTH FOR BB-RA.
- FOR UA APPLICATIONS, ADDITIONAL TIES MAY BE REQUIRED AT STEM WALLS. SHEAR TIES ARE NOT REQUIRED FOR INSTALLATION AWAY FROM EDGE (SEE DETAIL 1A), INSTALLATION ON WOOD FRAMING, OR FOR IRC BRACED WALL PANEL APPLICATIONS.
- STIRRUPS ARE GRADE 60 (MIN) REBAR SEE TABLE FOR SIZE AND SPACING. SEE "STIRRUP LAYOUT" DIAGRAMS AND "KEY" FOR I AYOUT PATTERNS
- CONCRETE EDGE DISTANCES MUST COMPLY WITH ACI 318-14, **SECTION 17.7.1**

HFX ANCHOR CENTERLINES

#### **IMPORTANT!**

- ANCHORAGE IS DESIGNED FOR TENSION AND SHEAR TRANSFER ONLY, FOUNDATION DESIGN PER FOR
- 2. REINFORCEMENT SHOWN IS THE MINIMUM REQUIREMENT AND IS NOT INTENDED TO REPLACE REINFORCEMENT DESIGNED BY THE
- 3. FOR RA AND BB-RA INSTALLATIONS, THE HFXBB BOLT BRACE MAY BE PLACED ON TOP OF THE STIRRUPS WITH DOUBLE-NUTS INSTALLED AT EMBED END OF STANDARD GRADE ANCHOR RODS. (NOTE: 1/2" x 3" x 3" MIN. HFPW PLATE WASHERS ARE REQUIRED TO BE DOUBLE-NUTTED AT EMBED END OF HIGH STRENGTH ANCHOR RODS.)
- HIGH STRENGTH ALL-THREAD RODS PROVIDED BY HARDY FRAMES ARE STAMPED ON BOTH ENDS. HF

#### BACK TO BACK INSTALLATION

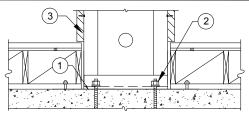

- WOOD FILLER WITH USP MP4F CONNECTORS BOTH SIDES, QUANTITY BY BUILDING DESIGN PROFESSIONAL.

  1/4" x 3" (MINIMUM) WS SCREWS, QUANTITY PER TABLES

  ADJACENT FRAMING WITH 1/4" DIAMETER SCREWS INSTALLED THROUGH
- PRE-PUNCHED HOLES IN PANEL EDGES REQUIRED WHEN INSTALLING A FILLER GREATER THAN 1-1/2" ABOVE TO BRACE OUT-OF-PLANE HINGE OR
- WHEN SPECIFIED BY THE DESIGN PROFESSIONAL. PRE-DRILL 3/16" DIA. HOLES, EVENLY SPACED IN FACE OF PANEL NO LESS THAN 2-1/4" OC AND INSTALL 1/4" DIA. WOOD SCREWS INTO 2x (MIN.) WOOD "LEDGER" IN PANEL CAVITY
- CONNECTOR AND ATTACHMENT BY BUILDING DESIGN PROFESSIONAL

#### FILLER GREATER THAN 1-1/2 IN.

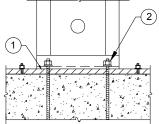

- 15# FELT OR EQUIVALENT MOISTURE BARRIER RECOMMENDED BETWEEN
- PANEL BASE AND CONCRETE.
  NUTS AND WASHERS PER TABLE NOTE 1
- ADJACENT FRAMING WITH 1/4" DIAMETER SCREWS INSTALLED AT THE PANEL EDGES WHEN INSTALLING A FILLER GREATER THAN 1-1/2" ABOVE OR WHEN SPECIFIED BY DESIGN PROFESSIONAL.

#### RAISED FLOOR HEAD-OUT

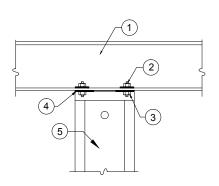

ALLOWABLE VALUES ON 2x PLATE ARE LESS THAN INSTALLATION ON CONCRETE

- 15# FELT OR EQUIVALENT MOISTURE BARRIER RECOMMENDED BETWEEN PANEL BASE AND TREATED PLATE. NUTS AND WASHERS PER TABLE NOTE 1.

#### INSTALLATION ON 2x PLATE

- STEEL BEAM PER PLANS ALL THREAD RODS THRU-BOLTED TO STEEL BEAM BY BUILDING DESIGN PROFESSIONAL.
- NUTS AND WASHERS PER TABLE NOTE 1.

  HARDY FRAME\* STACKING WASHERS (HFSW( REQUIRED TO BE
- WELDED INSIDE TOP CHANNEL OF LOWER PANEL.

  HARDY FRAME\* "STK" PANEL WITH STACKING WASHERS WELDED

  INSIDE THE TOP CHANNEL BY MANUFACTURER.

#### STEEL BEAM ABOVE THRU-BOLT

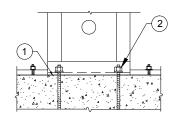

- 1/4" x 3" (MINIMUM) WS SCREWS, QUANTITY PER TABLES
- 1/4" x 4-1/2" (MINIMUM) WS SCREWS, QUANTITY PER TABLES

#### TOP PLATE CONNECTIONS

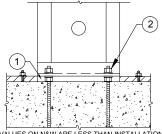

- 15# FELT OR EQUIVALENT MOISTURE BARRIER RECOMMENDED BETWEEN PANEL BASE AND CONCRETE
- NUTS AND WASHERS PER TABLE NOTE 1.

#### INSTALLATION ON CONCRETE

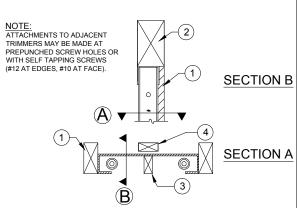

ALLOWABLE VALUES ON N&W ARE LESS THAN INSTALLATION ON CONCRETE

- PLUS OR MINUS 1-1/2" GAP TO BE FILLED WITH 5,000 PSI NON-SHRINK
- GROUT (MINIMUM). NUT AND WASHER GRADES PER TABLE NOTE 1.

INSTALLATION ON NUTS & WASHERS (10)

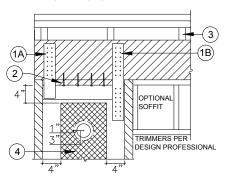

- TRIMMERS PROVIDE FULL BEARING FOR HEADER ABOVE, DESIGN AND CONNECTIONS BY BUILDING DESIGN PROFESSIONAL
- WOOD MEMBERS FOR BACKING MAY BE INSERTED VERTICALLY OR HORIZONTALLY IN THE PANEL CAVITY AS NEEDED. WOOD MEMBER FLUSH TO FACE OF WALL FOR BACKING AS NEEDED.

#### 6x HEADER ABOVE-SECTIONS

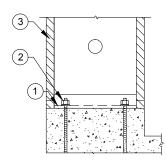

#### NOTE

\_\_\_\_ TO PREVENT DRILLING ADDITIONAL HOLES ORIENT THE PANEL CAVITY TOWARD THE FIXTURE BEING INSTALLED.

- (A) PRE-WELDED STRAPS ARE PROVIDED ON 78" AND 79-1/2" PANEL HEIGHTS. THEY ARE AVAILABLE FOR OTHER HEIGHTS UPON REQUEST.
  (B) FIELD INSTALLED STRAPS WITH SELF TAPPING SCREWS ARE PERMITTED.
  THE DESIGN AND CONNECTION IS BY THE DESIGN PROFESSIONAL.
- A 2x WOOD FILLER WITH 1/4"x4-1/2" (MIN.) WS SCREWS IS PERMITTED WHEN CRIPPLE STUDS OCCUR, SHEAR TRANSFER DESIGN TO BE PER THE BUILDING DESIGN PROFESSIONAL.
- A 1" DIA HOLE MAY BE ADDED IN THE PANEL FACE WHEN IT IS LOCATED IN THE UPPER HALF OF THE PANEL HEIGHT AND IS 4" MINIMUM FROM ANY EDGE. FOR PANELS MORE THAN 12" WIDE, ADDITIONAL HOLES MUST BE OFFSET 1" MINIMUM FROM THE 3" DIA. PREPUNCHED HOLE. FOR HOLES LARGER THAN 1" DIAMETER OR TO ADD MORE THAN ONE HOLE CONTACT MITEK HARDY FRAME TECHNICAL SUPPORT AT (800) 754-3030

#### TOP CONNECTION TO HEADER

- 15# FELT OR EQUIVALENT MOISTURE BARRIER RECOMMENDED BETWEEN PANEL BASE AND CONCRETE.
  NUTS AND WASHERS PER TABLE NOTE 1.
- ADJACENT FRAMING OPTIONAL U.N.O. BY BUILDING DESIGN PROFESSIONAL

NOTE: HARDY FRAME STACKING WASHERS (HFSW) ARE REQUIRED IN THE TOP OF PANELS WHEN CONNECTING TO TENSION ANCHORS FROM ABOVE. HARDY FRAME® "STK PANELS" INCLUDE HFSW WASHERS PRE-WELDED IN THE TOP CHANNEL.

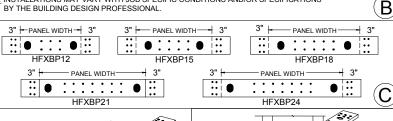

- HOLD DOWN TENSION ANCHORS SPECIFIED AS STANDARD GRADE (STD) MUST COMPLY WITH ASTM F1554 GRADE 36 (OR EQUAL). HOLD DOWN TENSION ANCHORS SPECIFIÉD AS HIGH STRENGTH (HS) MUST COMPLY WITH ASTM A 193 GRADE B7 (OR EQUAL). TENSION ANCHORS (BOTH GRADES) CONNECT TO THE UPPER AND LOWER PANELS WITH HARDENED ROUND WASHERS AND GRADE 8 NUTS FRAME "HFSW" STACKING WASHER IS REQUIRED IN THE TOP CHANNEL OF THE LOWER PANEL (AVAILABLE PRE-WELDED IN A HARDY FRAME \*"STK" PANEL). ALTERNATE WASHERS ARE (2 EA) ROUND-FLAT OR (2 EA) SAE WASHERS AT EACH ANCHOR CONNECTION. ALTERNATE NUTS ARE 2H HEAVY HEX.
- 1/4" DIAMETER MITEK \*PRO SERIES ™WS SCREWS. LENGTH IS 3" (MINIMUM) WHEN ATTACHING DIRECTLY TO THE COLLECTOR AND 4-1/2" (MINIMUM) WHEN INSTALLING A 2x FILLER ABOVE THE PANEL.
- 1/4" DIAMETER MITEK ®PRO SERIES ™WS SCREWS. LENGTH IS 4-1/2" (MINIMUM) AT CONNECTIONS TO FLOOR SYSTEMS AND BEAMS BELOW
- 1/4" DIAMETER SCREWS ARE REQUIRED AT THE EDGES WHEN INSTALLING A FILLER GREATER THAN 1-1/2 INCH ABOVE OR WHEN SPECIFIED BY THE DESIGN PROFESSIONAL.

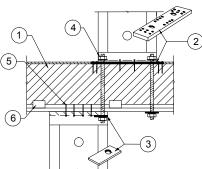

INSTALLATION ON FLOOR SYSTEMS WITH HARDY FRAME® BEARING PLATE (HFXBP)

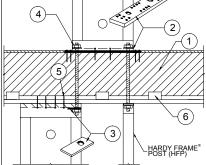

- WITH HOLES PRE-DRILLED FOR 1-1/8" DIA TENSION ANCHORS, INSTALL A SOLID 4x (MINIMUM) RIM IN FLOOR SYSTEM AT PANEL LOCATION. ALLOWABLE VALUE TABLES ASSUME THE RIM IS ENGINEERED WOOD PRODUCT (EWP).
- NOTCH FLOOR SHEATHING THEN INSTALL HFXBP ON RIM WITH 6 EACH 1/4"X4-1/2" (MIN) "WS" SCREWS AT
- 3. PLACE PANEL ON HFXBP.
- WHEN STACKING PANELS, INSTALL "HFSW" STACKING WASHERS IN THE TOP CHANNEL OF THE LOWER PANEL. CONNECT LOWER TO UPPER PANELS WITH TENSION ANCHORS (GRADE PER PLANS) AND SECURE AT BOTH ENDS WITH HARDENED ROUND WASHERS AND GRADE 8 NUTS TO BE SNUG TIGHT. HARDY FRAME "STK" PANELS THAT INCLUDE "HFSW" STACKING WASHERS PRE-WELDED IN THE TOP CHANNEL ARE AVAILABLE.
- WHEN MORE THAN 12 SCREWS ARE REQUIRED FOR THE BOTTOM CONNECTION OR JOINTS IN FRAMING MEMBERS OCCUR AT SCREW LOCATIONS, INSTALL ADDITIONAL 1/4"x4-1/2" WS SCREWS THROUGH THE BASE OF PANEL WHERE THEY ALIGN WITH HOLES IN THE HFXBP.
- FOR STANDARD WALL HEIGHTS, INSTALL A 2x FILLER ABOVE PANEL (DTL 5/HFX2). FOR FILLERS GREATER THAN 1-1/2 IN. SEE DETAIL 6/HFX2.

NOTE: INSTALLATIONS MAY VARY WITH JOB SPECIFIC CONDITIONS AND/OR SPECIFICATIONS BY THE BUILDING DESIGN PROFESSIONAL.

- 4x (MIN) RIM, ALLOWABLE VALUE TABLES ASSUME ENGINEERED WOOD PRODUCT.
  NOTCH FLOOR SHEATHING THEN INSTALL HARDY
- FRAME® BEARING PLATE (HFXBP) AND PANEL PER INSTALLATION NOTES 3-6, DETAIL B/HFX3.
- HARDY FRAME® STACKING WASHER (HESW) AT TOP OF PANEL REQUIRED WHEN CONNECTING TO TENSION ANCHOR FROM ABOVE.
- 1-1/8" DIA. HOLD DOWN, HFSW AND N&W PER TABLE NOTE 1 ARE PROVIDED IN *HARDY FRAME*\*HFTC KIT. 1/4" x 4-1/2" (MIN) WS SCREWS, QUANTITY PER TABLE.
- USP MP4F CONNECTORS, QUANTITY BY BUILDING DESIGN PROFESSIONAL.

- 4x (MIN) ŘÍM, ALLOWABLE VALUÉ TABLES ASSUME ENGINEERED WOOD PRODUCT. NOTCH FLOOR SHEATHING THEN INSTALL *HARDY*
- FRAME\*BEARING PLATE (HFXBP) AND PANEL PER INSTALLATION NOTES 3-6, DETAIL B/HFX3.
- HARDY FRAME® STACKING WASHER (HFSW) AT TOP OF PANEL REQUIRED WHEN CONNECTING TO TENSION ANCHOR FROM ABOVE.
- 1-1/8" DIA. HOLD DOWN, HFSW AND N&W PER TABLE NOTE 1 ARE PROVIDED IN HARDY FRAME® HFTC KIT. 1/4" x 4-1/2" (MIN) WS SCREWS, QUANTITY PER TABLE

#### MiTek® Hardy Frame® Special Moment Frame

MiTek® Hardy Frames introduced the first standardized, prefabricated Special Moment Frame in 2006. Since then we have delivered thousands of Moment Frames that have been successfully installed. Our Special Moment Frames provide maximum structural capacities and enable large openings in architectural design.

The MiTek® Hardy Frame® Special Moment Frame (HFSMF) connections are approved in the AISC 358 Prequalified Moment Connection Standard. As part of the review, testing was submitted to confirm that **lateral bracing to prevent twist and out-of-plane displacements is not required** at the Hollow Structural Section (HSS) beams used in the HFSMF.

#### **CONFIGURATIONS**

The *MiTek*® *Hardy Frame*® Special Moment Frame is available in multi-story, multi-bay, Portal Frame and Picture Frame configurations. Picture Frames consist of four column to beam special moment connections.

#### **HFSMF IN MULTI-FAMILY PROJECTS**

- Standard Sizes
- Table values
- Pre-engineered anchorage solutions
- Compatable with wood framing
- Fits in standard wood walls/framing

#### MITek® HARDY FRAME® HFSMF DESIGN MANAGER

The interactive, web based HFSMF Design Manager from MiTek<sup>®</sup> enables you to easily input SMF design parameters then submit to our engineers with the click of a mouse. Custom SMF Designs and job specific installation details have never been so easy.

- As Frame geometry, frame configuration, anchorage connections and wood nailer options are input, image graphics are updated instantly to reflect the selections.
- When live and dead loads are entered; uniform or concentrated, a loading diagram is simultaneously provided reflecting the input.
- The Design Manager can now be used for single or two story Frames, up to 3 bays.

PORTAL FRAME

**PICTURE FRAME** 

#### **HFSMF IN RETROFIT CONDITIONS**

- Custom designs to meet job specific conditions
- Delivery options
  - Preassembled
  - Column Splice Fully Bolted
  - Knock-Down Limited Field Welded Assembly

#### **TOP CONNECTION OPTIONS**

- Angles
- Shear Transfer Plates
- Through-Bolt

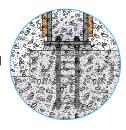

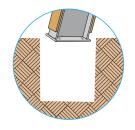

#### TYPICAL ANCHORAGE

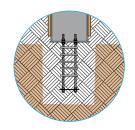

For cast-in applications prior to installation of the HFSMF a Template Kit containing all-thread anchors, nuts, washers, Template, Bolt Brace and shear ties is available

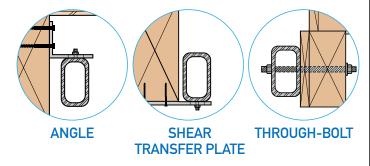

#### When concrete is poured after installation of the HFSMF

- 1) Dig foundation to required concrete edge and end distances
- 2) Lower the HFSMF base plates into the open foundation then raise into place and shore safely
- 3) Connect the anchorage to the base plate then pour concrete

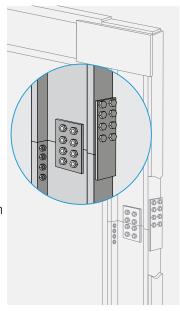

#### **OPTIONAL TOP CONNECTIONS**

### MOMENT FRAME COLUMN SPLICE OPTION

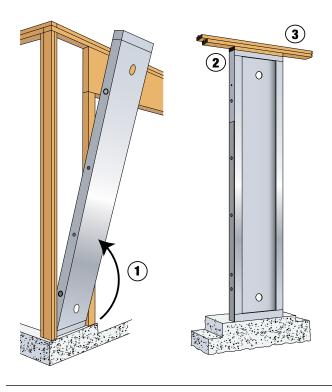

The column splice enables installations in restricted exisiting conditions.

- No field welding
- Easier than SMF bolted connections
- · Accessible from ground
- Easy to locate and position in existing structures

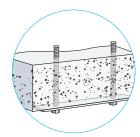

#### MITek® HARDY FRAME® PANEL INSTALLATION

- 1. Tilt Panel, lift over bolts and swing into the existing space
- 2. Install 2x filler at 1-1/2" gap
- 3. Connect with 1/4 x 4-1/2 USP WS-Series Screws

#### THROUGH-BOLT

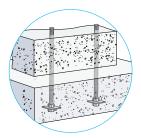

The design, including capacity of existing concrete and size of Bearing Plates below is determined by the Engineer of Record. The adjacent illustration shows installation with a MiTek® Hardy Frame® Bearing Plate (HFXBP) at the underside of concrete.

THROUGH-BOLT

#### **NEW FOOTING BELOW**

MiTek® Hardy Frame® unreinforced or reinforced anchorage solutions may be used below existing concrete or to replace existing concrete.

# BRANDS YOU KNOW. PRODUCTS YOU TRUST. SOLUTIONS THAT PERFORM.

#### MITEK® BRANDS MEAN MORE CHOICE AND VALUE FOR YOUR CUSTOMERS.

IN RESIDENTIAL CONSTRUCTION, BETTER STRUCTURES START WITH "BETTER TECHNOLOGY" SOLUTIONS. AT MITEK®, WE OFFER A FULL RANGE OF PRODUCTS AND INNOVATIONS TO HELP YOU DELIVER MORE VALUE TO YOUR CUSTOMER AT EVERY STAGE OF THE PROJECT.

MiTek HARDY FRAME Shear Wall Systems

Recognized leaders in the design and pre-fabrication of quality shear walls and moment frames for strength, versatility and performance.

MiTek\*
USP\*
Structural Connectors

Our full line of code-approved, engineered structural connectors, anchors and software solutions backed with robust software selection tool, professional engineering and technical support.

MiTek 24 Tie-Down Systems

Quality continuous Tie-Down systems that resist wind uplift and seismic overturning forces while compensating for shrinkage in multi-story, wood-framed buildings.

#### GIVE YOUR CLIENTS MORE CHOICE.

MiTek's innovative technology, specification tools, and strong support give your builders better choice and a better bottom line.

#### ADD MITEK BRANDS TO YOUR SPECIFICATIONS

Visit MiTek-US.com/specify to access specification guides to spec MiTek® products. Call to Learn More: 800-328-5934

#### **GIVE YOUR CUSTOMERS MORE CHOICE.**

WITH THOUSANDS OF CODE-APPROVED AND TIME-TESTED PRODUCTS, MITEK GIVES YOU THE ABILITY TO OFFER YOUR CUSTOMER GREATER CHOICE AND FINANCIAL FLEXIBILITY. TO VIEW OUR PRODUCTS FOR DOCUMENTATION, ILLUSTRATIONS, LOAD RATINGS AND MORE, VISIT OUR MITEK-US.COM WEBSITE TO DOWNLOAD OUR FREE PRODUCT APPS.

#### The Best Designs are Built with the Best Technology

Designing for high wind and seismic loads? Start with MiTek Hardy Frame<sup>®</sup> Special Moment Frame. Its pre-fabricated, pre-engineered system features MiTek's exclusive SidePlate<sup>®</sup> moment connection to maximize lateral load resistance, while minimizing the frame's column profile. MiTek Hardy Frame renowned performance allows for larger openings (and less required wall area), even under the toughest requirements.

#### **Experience True Support**

What sets MiTek<sup>®</sup> apart is our genuine, core passion for serving our customers, and for building trust through our uncompromising commitment to helping them succeed- immediately, and in the long run.

#### Offer Greater Value

We understand what it takes to make your project successful. From optimizing structural integrity and improving your workflow to minimizing jobsite downtime, our working relationship translates into real value for you and your customer.

#### **Specify MiTek Brands For a Better Build**

MiTek® brands are not only a great fit for your project, they're better for your business. On your next build, specify MiTek Hardy Frame®, MiTek® USP Structural Connectors and Z4® Tie-Down Systems and give your customers a choice with greater value and a faster return.

#### MITEK® SPECIFIER

We're making it even easier to specify MiTek® on your next project. Start with our MiTek® Specifier Software for quick and simple product selection and documentation.

MiTek® Z4 Tie-Down Systems utilize CNX-Series Cinch Nuts to compensate for wood shrinkage and building settlement that cause connections to loosen over time. The Cinch Nut uses a self-ratcheting action that permits the cinch nut to move (the rod doesn't move) or "travel" perpetually in one direction only down the rod. Available for installation with threaded rods that are 3/8 inch through 1-1/2 inch diameter in 1/8 inch increments, the CNX Cinch Nut has been code evaluated and published in ESR-2190.

- Place the specified Bearing Plate Washer onto the bottom plate of a wood framed wall.
- With the "wings" oriented downward, place Cinch Nut over the Z-Rod extending from below and push down until it seats firmly on the Bearing Plate Washer.
- Install 1/4 inch diameter MiTek® Pro-Series™ Screws through the wings, penetrating 1-1/2 inches (minimum) into the wood bottom plate.
- Model numbers BPW5 and BPW6 fit in-between the screws fastening the wings.
- Model numbers BPW7 (3-1/4 x 4-3/8) and larger are provided with two screw holes. Align the wing and the Bearing Plate Washer screw holes to allow installation of 1/4 inch diameter MiTek<sup>®</sup> Pro-Series™ Screws.

BPW7 and larger Installation

# for Wind Uplift Loads

#### MiTek® Z4 Tie-Down System for Lateral Load

To resist tension loads due to overturning moments in multi-story buildings the CNX Cinch Nut is installed over a Bearing Plate Washer at each level in a fast and easy application. At the upper-most level a Cinch Nut is installed over a Bearing Plate Washer above the top plates. At walls below that bear on wood floor systems, the Cinch Nut and Bearing Plate Washer are installed over the bottom plate. Tension loads are gathered at each level and transferred into the foundation through a continuous system of Cinch Nuts, Bearing Plate Washers, Z-Rods/ATRs and Couplers all are available lines of MiTek®. USA.

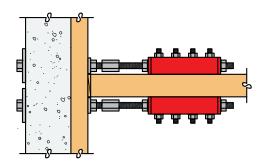

#### MiTek® Z4 Tie-Down System for Wind Uplift

For resisting roof uplift loads resulting from wind the Z4 Cinch Nut is installed over a Bearing Plate Washer above the top plates with roof framing above to create a tie-down system. Uplift forces are transferred into a continuous system of Z-Rods / ATRs and Couplers that form a load path to the foundation.

**Paired CT Wall Tie** 

**Paired CT Purlin Tie** 

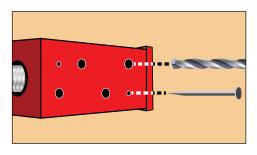

Sandwiched T2
As Concentric
Hold-Down

#### **MiTek® Z4 Continuity Tie**

The MiTek® Z4 "CT" is a steel tube with steel end plates welded to both ends designed to transfer tension and compression forces from one beam to another (Purlin Splice application) or from a beam to a perpendicular wall (Wall Tie application). Connections are made by bolting the tube to a wood member and attaching to a threaded rod for transferring forces.

#### **Accurate Placement and Installation**

**Step 1:** Use the two 3/16" holes provided to nail CT or T2 at desired location on wood member

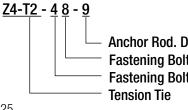

**Step 2:** Use the CT or T2 as a template to accurately drill holes for bolting

**Step 3:** Make bolted connection to the wood member per plans and specifications

**Step 4:** Make threaded rod connection per plans and specifications.

#### **MiTek® Z4 Tension Tie**

The MiTek® Z4 "T2" is a steel tube with a steel end plate welded to one end designed to transfer tension forces with a single concentric hold-down device. Sandwiched Installations are made by through bolting two wood members with a T2 between. The tube is then attached to a threaded rod to transfer the tension loads.

- 3. #10 Hex Head self-tapping screws with a Self Drilling (SD) point are recommended into face of Panel.

#### **Hole Chart**

An additional 1" diameter hole may be drilled in the upper half of the Panel when it is located in the hatched area.

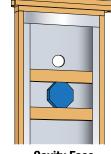

To drill more than one hole, a larger diameter hole or a hole in a location outside of the hatched area, contact MiTek Hardy Frames.

#### **Fixture Installation**

#### 2x4 Wall Framing

- There is no "inside or outside face" of MiTek<sup>®</sup> Hardy Frame<sup>®</sup> Panels.
- Install with the cavity face of Panel oriented in the direction of the fixture to be attached
- Install 2x backing in the cavity and secure with #10 (minimum) self-tapping screws through the wood into the steel or with 1/4"WS-Series screws through pre-drilled holes in the face of Panel. Pre-drilled holes must be evenly spaced no less than 3" OC

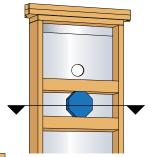

**Cavity Face**Panel in 2x4 framing with

cavity towards outside face of wall

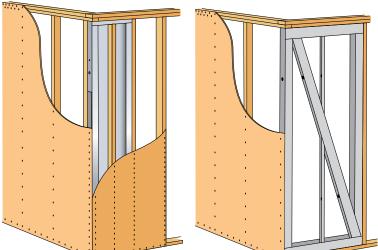

#### 2x6 Wall Framing

- Installation of Panels are recommended to be at the inside face of a 2x6 wall to increase the concrete edge distance at the hold down anchors and to provide a 2" recess that can be used to:
  - Provide flat stud backing for surface finishes
  - Provide a thermal break in cold weather climates
  - Install a fixture at one or both faces of the wall

**Solid Face** 

Panel set flush to inside face of 2x6 wall

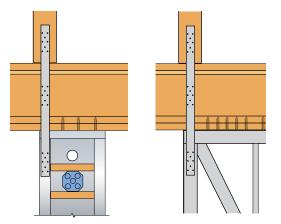

#### Wood

For attaching wood, siding, drywall and other surface finishes to the Panel or Brace Frame face #10 Flat or Wafer Head, self-tapping screws with a "Winged" self drilling (SD) point are recommended. When connecting to the edge of Panels, use a #12 diameter screw.

#### Steel

When attaching steel connectors (12-gauge maximum) fixtures, electrical boxes, wire mesh, etc. to the Panel or Brace Frame face #10 Hex, Flat Truss or Modified Truss Head with a Self Drilling (SD) point are recommended. When connecting to the edge of Panels, use a #12 diameter.

#### ADDITIONAL PUBLICATIONS FROM MiTek®, USA

MiTek® Builder Products is a division of MiTek© USA, Inc. MiTek product lines include the Hardy Frame® Shear Wall system, USP® Structural Connectors and Z4 Tie-Down System..

#### **Typical Installation Detail Pages**

MiTek<sup>®</sup> provides the Hardy Frame Typical Installation Details in plan format. These pages are available in ACAD or pdf; organized by anchorage, typical first floor installations and those on floor systems. Any or all of these pages may be attached to your plans as supplemental sheets or you can copy selected details as needed.

#### **Installation Guide**

The MiTek® Hardy Frame® Installation Guide was written specifically for Suppliers and Installers. This publication provides all HFX model numbers, dimensions, bolt and screw patterns, connectors, installation illustrations, attachments and information regarding Template Kit (HFXTK) and Floor to Floor Tension Connector Kit (HFTC) components.

#### **Retrofit Guide**

Provides Building Owners with an introduction to construction techniques and MiTek® product lines available to strengthen soft-story buildings in retrofit applications. The MiTek® Hardy Frame® Shear Wall System combined with USP® Structural Connectors provides soft story solutions. This guide can be used by the Design Professional to illustrate retrofit concepts to their clients.

#### MiTek® Z4 Product Catalog

**The MiTek® Z4 product line** includes the Cinch Nut, Continuity Tie (CT) and Tension Tie (T2). The Cinch Nut is a self ratcheting device that is designed to maintain a tight connection in the Z4 continuous "Quick Connect" rod system. The Cinch Nut, along with the CT and T2, offer more design options than any other hold down system and are rated for tension capacities that range from 5,000 to over 82,000 lbs. In addition to continuous rod applications, the T2 can be used as a hold down in conventionally framed shear walls.

#### MiTek® USP® Structural Connectors Product Catalog

Introducing the 2017 online catalog featuring new structural connector products and updated technical information. Our digital version will be updated often to ensure content is always current. This catalog is a comprehensive guide to our extensive product line featuring over 250 detailed application illustrations and detailed installation instructions, fastening schedules and load ratings. EWP and Plated Truss connectors are included. www.mitek-us.com/resources/Product-Catalog/
